Zain Ul Abideen

Web & AI Developer

zain.ijaz12334@gmail.com +92-331-4658447 github.com/ZainUlAbideen-01
linkedin.com/in/zainulabideencs23

Summary

Full Stack Developer with practical experience designing and developing full-stack web applications and delivering complete software projects. Proficient in modern web technologies with a strong foundation in frontend, backend, and database development. Experienced in developing intelligent applications using Machine Learning, Deep Learning, and Computer Vision, with hands-on experience building real-time detection systems.

Education

Bachelor of Science in Computer Science *Expected Graduation: 2027*
University of Engineering and Technology (UET) Lahore

Work Experience

Full Stack Web Development Intern – DevSynt *Remote / Jul – Sep 2026*
8-week full-stack internship building web applications with secure authentication and cloud integrations.
Technologies: React, Vite, TypeScript, Tailwind CSS, React Query, Node.js, Express, MongoDB, JWT, Cloudinary, Nodemailer

- **Image Manager** (Capstone): Built a full-stack image hosting platform with secure JWT authentication via httpOnly cookies and automatic token refresh, email verification, and a forgot/reset password flow; implemented Cloudinary image uploads with multer and express-rate-limit brute-force protection.

Full Stack Development Fellow – Zeppelin Labs *Remote / Jul – Sep 2026*
8-week fellowship delivering multiple full-stack products within a team, focused on backend architecture and real-time systems.
Technologies: Express, NestJS, MongoDB, Redis, Socket.io, TypeScript, Cloudinary, Nodemailer

- **TruckLink** (Backend Developer): Built a marketplace connecting drivers with recruiters, implementing authentication, freight listings, and a real-time request/response flow using NestJS, MongoDB, and Socket.io, with Cloudinary-backed media handling.

Projects

UNISON – Alumni Network Platform | *Next.js, NestJS, React.js, MongoDB, Neo4j, Socket.io, JWT* | unison-lovat.vercel.app
Co-developed a cross-platform alumni networking ecosystem for the Computer Science Department, UET Faisalabad, comprising a Next.js web app, and a React.js admin dashboard, backed by a NestJS REST API – connecting students, alumni, and faculty for mentorship and opportunity discovery. Implemented JWT authentication with OTP verification and role-based access control, real-time messaging and notifications via Socket.io, and graph-based networking features (connection suggestions, recommendations, and analytics) by combining MongoDB for application data with Neo4j for relationship-based querying across alumni, batches, departments, and companies.

Skills Exchange Board | *Express, MongoDB, Redis, Socket.io, TypeScript* | GitHub
Backend developer on a platform enabling users to trade skills with others nearby; built real-time matching and messaging with Socket.io, Redis-backed caching, and automated email notifications via Nodemailer.

SpaceSync – Resource Booking Manager | *Next.js, Tailwind CSS, shadcn/ui* | GitHub
Frontend developer on a campus/office resource booking platform for managing room and space availability, featuring calendar-style views and automated booking-conflict handling to simplify scheduling.

Gym Fitness Tracker | *Python, Computer Vision, MediaPipe-Hands, MediaPipe-Pose* | github.com/ZainUlAbideen-01/AI-Based-Gym-Fitness-Tracker
Built an AI-powered workout tracker that uses computer vision and MediaPipe's Hand to select exercise by pointing on screen and MediaPipe's Pose estimation to detect body landmarks, track exercise form, and count repetitions in real time via webcam.

Pneumonia Detection System | *Python, ResNet-18* | github.com/ZainUlAbideen-01/Pneumonia-Detection-System-using-Deep-Learning
Fine-tuned a ResNet-18 convolutional neural network on labeled chest X-ray datasets to classify pneumonia cases

with high diagnostic accuracy, demonstrating applied deep learning in a medical imaging context.

Achievements & Certificates

Achievements

- **5th Place, DigiMunshi** – 48-hour hackathon among 500+ projects; built an Urdu voice-based *udhaar* (credit) management tool for Pakistani shopkeepers, with sales recording, balance lookup, and AI-driven profit/loss summaries. Organized by Pak Angels, iCodeGuru, ASPIRE Pakistan, NCEAC, HEC Pakistan, and PEC.
- **Top 10, Punjab Youth Innovation & Incubation Competition 2026** – Selected for *LifeFlow*, a real-time blood donation coordination platform connecting hospitals, patients, and verified donors using AI, graph technology, and real-time notifications. Organized by the Business Incubation Center (BIC), UET Lahore.

Certificates

- Generative & Agentic AI Training – Pak Angels, HEC-NCEAC, and PEC
- Kaggle: Intro to Machine Learning, Intermediate Machine Learning, Data Visualization, Feature Engineering, Intro to Deep Learning

Technical Skills

Web Technologies	JavaScript, TypeScript, React, Next.js
Backend	Node.js, Express.js, Nest.js
Databases	MongoDB, SQL, Neo4j
Languages	JavaScript, TypeScript, Python, C++, C#
Frameworks / SDKs	.NET, React
AI / ML	Computer Vision, Deep Learning, Model Training
Other	Git, Github, Netlify, Object-Oriented Programming, REST APIs
